

We scale Inkjet Processes from Lab to Fab

## IMPORTANCE OF PROCESS DEVELOPMENT

Process development helps optimize various parameters such as:

- Ink formulation
- Printhead selection
- Substrate choice
- Substrate preparation
- Printing speed
- Image resolution

By systematically adjusting these parameters, process development can enhance the **printing quality**, **efficiency, and reliability of inkjet printing**.

This is particularly important for industrial applications, where consistent and high quality printing is required for mass production.

Additionally, process development can help **minimize the environmental impact of inkjet printing** by reducing ink and energy consumption and waste generation.

# Scaling Process - Phase 1

The inkjet print head selection directly affects the quality and speed of the printing process. The print head determines the

- Size of droplets
- Shape of droplets
- Print speed
- Number of nozzles and throughput
- Nozzle configuration

Print process implementation

System development (optional) On-site process support

Choosing the right print head can improve **print resolution, accuracy, and overall print quality**, while also increasing printing speed and reducing ink consumption. Therefore, selecting the appropriate inkjet print head is crucial for achieving the desired printing results, as each ink type requires a different specific print head.

PRINTHEAD WIDTH 40-70 mm (typ.) >120 mm (max.)

DROP VOLUME 2-200 pl (typ.) TECHNOLOGY piezo, actuators, heater, throughflow,

JETTING FREQUENCY 10-100 kHz

We work with all major printhead manufacturers and select them by application

# MCK TEST MATERIALS

Print process implementation is an essential step for transforming a proof-of-concept lab grade process to a stable process ready for high throughput mass production. Through the utilization of printed samples, we can fine tune the process in all key aspects of the inkjet process from the ink formulation to the ink deposition and the substrate preparation which guarantees optimal results for your process.

This is achieved through full control over both hardware and software which allows us to adjust every aspect of the print process and makes the full process implementation possible. Your custom process is implemented and transformed to fit any of our solutions which allow the step in your inkjet journey from lab machine to a fully automated and integrated platform.

#### **Proof of concept**

### Process tuning includes

- Production of samples
- Adjustment of printing strategies

![](_page_3_Picture_13.jpeg)

Print process mplementation

- Implementation of all parameters
- Nozzle calibration
- Jetting quality of all nozzles
- Dot position for all nozzles
- Dot size on substrate

# Scaling Process - Phase 5

![](_page_4_Figure_1.jpeg)

Process development is followed by system development. During system development, Notion Systems defines the system configuration based on the developed processes, e.g., selected printheads, ink, ink carrier materials and upstream and downstream processes. The modular system concept supports fast implementation and plays an important role by allowing easy scaling of the system for the optimal industrial production solution.

![](_page_4_Picture_7.jpeg)

**On-site** process support

#### Notion Systems supports

- During process implementation
- On-site or remotely in ramping-up the production
- Stabilizing and improving the process and yield
- Process improvements • Different kind of maintenance programs

# Advantages of Inkjet Printing

Inkjet is a non-contact, digital printing technology which creates fine structures of 30 microns and below. The fully digital non-contact printing enables wet-on-wet processing without the need for masks or screens.

Inkjet is used to replace established subtractive process sequences and reduces waste and energy consumption, which makes electronics production more economical and ecological.

# OUR DNA IS INKJET

assignment that requires advanced expertise in a range of technical areas. Inkjet printing is our passion and we brought together a range of experts in the field of process development, software and engineering to develop tailor-made inkjet systems for functional materials with the highest standards.
